EDUCATION

University of Mumbai (TSEC)

Bachelor of Engineering (Electronics & Telecommunications) ; CGPA : 9.125

Mumbai, India

2023 - 2027

EXPERIENCE

Vikram Sarabhai Space Centre (VSSC), ISRO

Project Intern and Research Trainee

Thiruvananthapuram, India

Nov 2025 - Jan 2026

- Engineered parallel VHDL RTL from C-based aerospace algorithms, ensuring bit-true accuracy against reference models while optimizing FPGA timing and resource utilizations.
- Executed robust Software-Hardware Co-simulation by developing C-based golden models to rigorously validate complex VHDL designs and corner cases prior to synthesis.

Krityam Solutions and Services

Full-Stack Developer Intern

Mumbai, India

May 2026 - Aug 2026

- Implemented Google Places API and Android Maps SDK across React Native and Cloudflare Workers, securing keys via SHA-1 fingerprinting and strict API restrictions.
- Built a TypeScript and Drizzle ORM notification bot to intercept Shopify webhooks and stream real-time, interactive order updates via the Telegram Bot API..
- Optimized GitHub Actions CI/CD pipelines for serverless deployment, resolving package-manager lockfile conflicts and updating Node.js runtime engines.

TECHNICAL SKILLS

Languages : Java, Javascript, TypeScript, C/C++, HTML/CSS.

Frameworks & Libraries : React.js, React Native, Expo, Node.js, Express.js, Cloudflare Workers, Drizzle ORM.

Databases : MySQL, PostgreSQL, MongoDB, Firebase, Cloudinary.

APIs and Integrations : Google Places API, Google Maps SDK, Telegram Bot API, Shopify Webhooks, NASA Open API.

DevOps & Developer Tools : Vercel, Render, GitHub Actions, pgAdmin, Postman, Git, GitHub, VS Code.

PROJECTS

[Daily Cosmos](#) | Tech Stack : MERN, Tailwind CSS, NASA Open APIs.

- Made a React.js dashboard integrating NASA Open APIs to visualize real-time Astronomy Picture of the Day (APOD) data.
- Designed an Express backend with fail-safe caching and Gemini 2.5 Flash integration for "Nova AI."
- Engineered MongoDB schemas for social matching algorithms, user interactions and dynamic ranking logic.

Attendance Detection System | Tech Stack : ReactJS, MongoDB, RFID/IoT

- Built a real time React dashboard for instant, no refresh attendance updates
- Engineered an event driven Node.js backend to seamlessly process continuous data from RFID scanners in real time,
- Designed a MongoDB database with state-tracking logic to automate "Entered" and "Exited" statuses.

Crop Disease Detector | Tech Stack : Raspberry Pi, TensorFlow, Firebase, MIT App Inventor, Edge Computing

- Engineered an offline TensorFlow model (PlantifyDr) to detect 37 plant diseases.
- Architected real-time Firebase sync between edge-deployed sensor hardware and cloud-based disease predictions.
- Developed a diagnostic mobile app in MIT App Inventor with a dashboard for plant-health tracking and disease alerts.

ACHIEVEMENTS

- Achieved Rank 2 in Semester 3 and Rank 1 in Semester 4.
- Participated in Deloitte Hackspllosion 2026 and Cognizant Technoverse 2026.
